

MAYDAY-HANSA-BOARD

Technical description

MAYDAY-HANSA-BOARD STANDARD EQUIPMENT

Made of environment safe, foamfilled, rotationcast polythene.

Lenght 335 cm - Widht 63 cm - Weight 30 kg - Boyancy 300 kg (approx.)

1. Handles 2 high and 2 low
2. Safety Line
3. Peep Hole
4. Hand Straps
5. Safety Belt
6. Bag (For Accessories 10,11,12)
7. Double Paddle
8. Combined, Telescopic Ice Pike And Rescue Hook
9. Securing Line
10. Thermo Bag
11. Ice Picks
12. Light Stick

MAYDAY-HANSA-BOARD

Accessories manual

Standard equipment

- 1. Handle 2 high and 2 low** - To carry/handle the board. Facilitate handling to pull, push and carry the board. For the victim to hold on to.
- 2. Safety Line-** Toss line with attached weight/floatation device, increasing the reach to the victim. Secure contact with the board in case the rescuer has to leave the board during the rescue operation. Line is 23 m.
- 3. Peep Hole-** under water the peephole facilitates visibility.
- 4. Hand Straps-** Extra handles for rescuer/victim. Easy to grab by the victim giving possibility to pull himself up. Several persons can hold on a keep afloat around the board. Constitutes the centre line of the board.
- 5. Safety Belt-** Belt/harness to secure the victim onto the board, if necessary.
- 6. Bag (For Accessories 10,11,12)-** For storage of small items.
- 7. Double Paddle-** To paddle the board as a "Kayak" on open water. (The board can also be paddled with your arms while lying on your stomach.)
- 8. Combined, Telescopic Ice Pike and Rescue Hook-** Via a built-in twist lock device with lock-line. Extendable (increases reach). Ice pike to check thickness of the ice. Hook to reach the victim.
- 9. Securing Line/stand-** Attach line to board at the carbin hook at end to secure the board at shore. Assisting rescue personnel pull the board back safely to shore. The line floats. Line is 300 m.
- 10. Thermo Bag-** Emergency thermal bag, combined blanket used when the victim is in shock. Protection against rain, wind and cold. Radar- and heat reflecting protection body bag.
- 11. Ice Picks-** Facilitates movement over thin ice. The rescuer lies on his stomach on the board and pulls himself forward. Can also be used by the victim or rescue personnel to pull himself from the water onto the ice.
- 12. Light Stick-** Brake-stick light. Shines with a yellow-green glow for about 30 minutes. To mark position of person or place. Works equally well under water.
