

VIKING Technical Rescue Suit

Outstanding multi-purpose protection

Highly breathable, flame resistant and waterproof in anti-static, lightweight material

Up to 90% of operations performed by firefighters do not demand high-risk fire and flashover protection. Instead, they need to move freely, act quickly and keep on working for hours and that's where VIKING clothing fits the task.

The super-lightweight VIKING Technical Rescue Suit is made from the GORE® PYRAD® Fabric Technology with an Aramid mesh, providing two layers of protection in one.

The unique material doesn't accumulate radiant heat, rejects static electricity and protects against cold wind and rain, while delivering high breathability.

This suit is designed to be extremely versatile - from the form-fitted features, to the extra protection and flexibility right where it is needed.

This helps you keep cool so you can work harder, for longer - and in greater comfort.

Built-in zipper transforms the suit to coveralls when needed. Can be worn with or without suspenders.

An optional zipper from ankle to knee makes it easier to don the suit, even with different shoes/boots.

First responder operations - Human and animal rescue - Traffic accidents and accident prevention
Floods and natural disasters - Clean up - Urban search and rescue - Height rescue - Technical assistance

VIKING Technical Rescue Suit

Approvals

- EN 16689:2017 Protective clothing for technical rescue
- EN ISO 20471:2013/A1:2016 High visibility Class 2: two coloured jacket and trousers. High visibility Class 3: single colour jacket and trousers - no need for a safety vest
- EN 343:2003/A1:2007 Waterproof rain protection
- EN 1149-5 Anti-static properties

Studies show that slight differences in core body temperatures, as low as 0.18 °C (0.3 °F), can impact comfort, affect decision-making and increase the risk of heat exhaustion.
